

Volleyball Sand

Volleyball Sand

Volleyball sand needs to be very soft, produce very little dust, be free of pebbles and not compact. Volleyball sand from R.W. Sidley, Inc. meets these specifications and those set by the FIVB for beach (sand) volleyball competitions.

Our Volleyball sand has been washed and is very clean. 92% of the sand particles medium and coarse, 18% fine grade. Our sand is mined from the Sharon conglomerate formation, is not made from a crushed rock. It has a natural sub angular particle shape, which allows it to drain well, and is free from any organic material.

Typical volleyball sand orders are for 100-200 tons of sand.

Product Information with chemical, physical and sieve analysis, is available upon request. Available packaging: Bulk quantities 3,000 lb. super sacks and 4,000 lb. super sacks. Delivery available.

Revised 03.29.22

Who We Are

With almost 90 years in business, R.W. Sidley, Inc. operates a state of the art processing plant that produces the highest quality quartz sands of the highest purity free from deleterious materials. All Volleyball Sands are washed, dried and screened at our Thompson, OH plant.
